

NAVEEN KUMAR GORAKALA

Java Backend Developer • Spring Boot • Microservices • Kafka • BFSI

Mumbai, Maharashtra | +91 7995185400 | naveengorakala814@gmail.com

PROFESSIONAL SUMMARY

Java Backend Developer with 3+ years of hands-on experience in Java, Spring, Hibernate, REST web services, and SQL, building and maintaining backend services for fintech and banking platforms. Strong practical expertise in Spring Boot microservices, Apache Kafka event-driven architecture, Redis and Hazelcast caching, and Oracle/MongoDB database optimization, with a consistent track record of improving API performance, system reliability, and production support outcomes. Writes unit tests using JUnit and Mockito, and applies AI-assisted development workflows — using ChatGPT to automate GitLab ticket-to-configuration logic generation and GitHub Copilot for code review and issue identification — alongside open-source engineering tooling (Git, GitLab, Docker, Swagger, Postman). Comfortable collaborating with architects, tech leads, and business teams to solve problems in live enterprise environments, with strong computer science fundamentals from a B.Tech in Computer Science and Engineering.

TECHNICAL SKILLS

Languages: Java, Groovy, SQL

Frameworks: Spring, Spring Boot, Spring Cloud, Spring MVC, Spring Data JPA, Hibernate

Web Services & Architecture: REST Web Services, Microservices, Distributed Systems, Event-Driven Architecture, API Lifecycle Management

Messaging & Caching: Apache Kafka, Redis, Hazelcast (distributed caching)

Databases & SQL: Oracle DB, MongoDB, SQL Query Optimization & Indexing

AI-Assisted Development: ChatGPT, GitHub Copilot

Open-Source Engineering Tools: Git, GitLab, Docker, Swagger, Postman, Apache Tomcat, Linux, Gradle

Testing & Practices: JUnit, Mockito, Exception Handling Frameworks, SOLID Principles, Design Patterns, Agile/Scrum

Cloud & DevOps: AWS, CI/CD (GitLab Pipelines)

Domain: Fintech, Banking & Loan-Processing Systems, Regulatory-Adjacent Enterprise Workflows

PROFESSIONAL EXPERIENCE

Software Developer — Perfios Solutions Pvt. Ltd.

Oct 2023 – Present

Mumbai, India

- Led development and maintenance of 20+ Spring Boot microservices powering fintech and loan-processing platforms, driving system modularity, scalability, and faster cross-team feature delivery.
- Owned REST API design and lifecycle for internal and customer-facing business operations, ensuring consistent, secure integration across admin, branch, and web platforms handling high transaction volumes.
- Improved high-frequency data access performance by 25% by architecting a Hazelcast distributed caching layer, directly reducing API latency and improving system responsiveness in critical, high-throughput workflows.
- Implemented Redis as a Hibernate second-level cache and via Spring Cache to reduce redundant database calls and improve read performance for frequently accessed data.
- Built a ChatGPT-integrated automation connecting GitLab ticket creation to configuration logic generation, enabling UI-side behavior to be driven by ticket-defined business rules and reducing manual configuration effort.
- Used GitHub Copilot for code review and issue identification, improving code quality and shortening review cycles across microservices.
- Wrote unit tests using JUnit and Mockito to validate business logic and service-layer behavior, improving code reliability and reducing regressions during feature delivery.
- Deployed and released services using CI/CD pipelines on GitLab, supporting consistent, repeatable, and reliable delivery to production environments.
- Modernized 10+ legacy Groovy services by migrating to Java 11, reducing technical debt and strengthening long-term maintainability, code consistency, and supportability of production banking systems.
- Implemented Kafka-based event-driven, asynchronous communication between services to decouple dependencies and improve reliability, fault tolerance, and resilience of distributed workflows.

- Reduced production incident troubleshooting time by ~40% by designing structured Log4J logging and diagnostic frameworks, improving traceability and operational visibility across microservices in a mission-critical environment.
- Refactored core business logic using Java 8 Streams and Lambda expressions, improving concurrency handling, readability, and execution efficiency across high-volume modules.
- Built centralized validation and exception-handling frameworks, strengthening API consistency, secure system design, and reducing recurring production defects.
- Tuned Oracle SQL queries, indexing strategies, and MongoDB access patterns, improving data retrieval efficiency and backend throughput for high-transaction-volume banking workflows.
- Drove root cause analysis and resolution of critical production incidents in a live, regulated enterprise banking environment, supporting system resilience and regulatory-grade reliability.

Software Engineer Intern — BridgeLabz Solutions

Feb 2023 – Oct 2023

Mumbai, India

- Contributed to backend feature development using Spring Boot within an Agile/Scrum environment, supporting sprint-based delivery of enterprise modules.
- Designed and implemented REST APIs for CRUD and core business operations using clean controller-service-repository separation, supporting maintainable microservice architecture.
- Improved database interaction efficiency by 20% through Spring Data JPA query refinement and repository optimization.
- Collaborated with cross-functional teams to deliver end-to-end backend functionality supporting enterprise web platform workflows.
- Contributed to debugging, testing, and code refinement, improving application stability and sprint delivery quality.

PROJECT EXPERIENCE

Loan Management System — Bank of India

Java, Spring Boot, Spring Cloud, Microservices, Kafka, Oracle DB, MongoDB, Hazelcast, REST APIs, Swagger

- Built and supported distributed microservices for high-volume loan-processing workflows (Gold Loan, KCC, Mudra, Personal Loan, Home Loan) used by admin, branch operations, and customer-facing portals in a regulated banking environment.
- Integrated third-party verification services (PAN verification, secure identity systems, Equifax/CIBIL credit bureau platforms), strengthening secure system design and streamlining onboarding workflows.
- Resolved 10+ critical production issues through log analysis, debugging, and root cause identification, improving system reliability and reducing recurrence of high-impact defects.
- Improved onboarding efficiency by supporting faster, more reliable integration-driven loan-processing flows across high transaction volumes.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Avanathi Institute of Engineering and Technology, Vizianagaram, Andhra Pradesh — Graduated June 2022
